eHealth Strategy

VISION

A strong, equal and efficient eHealth strategy to improve the quality of life for Thai citizens by 2020.

MISSION

1. Develop IT Management System for effective eHealth operations of the Country.
2. Partnership, coordination and participation to enhance the use of eHealth in order to improve the quality of life for people.

GOAL

1. Improve quality of life through inclusive access to eHealth services sustainably.
2. Local communities and networking partners benefit from the eHealth system so that they can lead the development of people's quality of life.

Thailand Introduces Stricter Smoking Laws

MARCH 6, 2019 BY [ROY CAVANAGH](#)

Thailand has recently introduced stricter smoking laws with **offenders facing a fine of up to 5,000 Baht**. Smokers visiting Thailand should take note that smoking is now not just banned inside some buildings, but also outside if it is too close to a public entrance or exit. This is a significant change that may catch tourists unaware if they light up a cigarette outside a hotel, pub or restaurant. **The new regulations from the Ministry of Public Health came into force in February this year.**

“
คุณูปการของท่านในครั้งนี้
จะยังผลให้เกิดประโยชน์
แก่ประเทศชาติเป็นอย่างสูง
เพราะเป็นการคุ้มครองสุขภาพ
ของประชาชนไทย
”

“นายกฯ ยังคงมาตรการทางกฎหมาย
ห้ามนำเข้า ห้ามขาย ห้ามครอบครอง บุหรี่ไฟฟ้า”

๒๐ สิงหาคม ๒๕๖๒

WHO Country Cooperation Strategy

Thailand

2017–2021

Message from the Regional Director

This fifth Country Cooperation Strategy (CCS) 2017–2021 is not only WHO's strategic vision for the Organization's work with the Royal Thai Government and its partners but, once again, is a pathfinder in global collaboration in health at the country level.

In recent years, Thailand has taken several bold initiatives with a large number of its population brought under health protection coverage. Thailand has achieved universal coverage with relatively good levels of spending on health, but faces significant challenges due to rising costs and its commitment to bring under the umbrella of its health coverage migrant workers and the informal sector.

Thailand is crucial to global health because of the extraordinary progress it has made in health and the prominent role it plays in global health.

The World Health Organization is proud of being a partner in some of the major health achievements of Thailand.

I commend the seventy-five governmental and nongovernmental stakeholders that reached agreement not only on priorities, goals and operational modalities but also chartered a CCS governance structure that would oversee optimal execution of the five Strategic Priorities for the World Health Organization's collaboration with Thailand.

I understand the final evaluation of the fourth WHO Country Cooperation Thailand 2012–2016 was conducted in June 2016. The evaluation gave a number of recommendations and I am pleased to see that these recommendations were taken onboard while developing this Country Cooperation Strategy.

I believe the five Strategic Priorities for WHO collaboration are aligned with Thailand's health priorities and WHO's resources focusing towards these priority programmes will contribute towards health progress in this extraordinary country as well as have a major impact on global health.

The method of working adopted will also foster multisectoral engagement and multiagency cooperation and ensure integrated approaches that respond to the imperatives of the 2030 Agenda for Sustainable Development and effectively address the complex and interconnected nature of health in the Sustainable Development Goals.

Dr Poonam Khetrpal Singh
Regional Director
WHO South-East Asia Region
